

Serial No. 10/757,462

Attorney Docket No. VX042585

LISTING OF CLAIMS:

1. (Currently amended) A ~~traveling construction machine~~ management system comprising:
a terminal provided on a ~~traveling construction machine~~; and
a server connected to the terminal through a communication channel, the server configured to facilitate ~~managing the traveling construction machine information unique to the construction machine, managing user information unique to the terminal, associating a unique and fixed identifier with the terminal, associating a communication period having setting a start and an end of a communication period and associating the communication period with the terminal and with a user, acquiring the identifier of the terminal from the user information managed by the server a communication from the terminal, and indicating that the communication is from the user only during the communication period and for communications having the identifier associate~~ notifying the user that the communication period is ending when the communication period ends ~~with the terminal~~.
2. (Currently amended) The ~~traveling construction machine~~ management system according to claim 1, wherein the server ~~is further is~~ configured to facilitate ~~acquiring resale/transfer user information indicating a new user of the terminal during the communication period, updating the communication period based on a resale/transfer user information to indicate at least a different start, and rewriting terminal user information on the terminal accumulated in the server and/or the terminal to indicate the new user, when resale/transfer user information is acquired from a selling agent's system during the communication period and when the acquired resale/transfer user information indicates a new user of the terminal~~.
3. (Currently amended) The ~~traveling construction machine~~ management system according to claim 2, wherein the server ~~is further is~~ configured to facilitate interacting with the user to determine whether the ~~terminal~~ user information acquired prior to the resale or transfer will be re-used during the updated communication period.
4. (Currently amended) The ~~traveling construction machine~~ management system according to claim 3, wherein the server discloses the ~~terminal~~ user information to a user of the terminal if the user information is to be re-used, and deletes the ~~terminal~~ user information accumulated in the

Serial No. 10/757,462

Attorney Docket No. VX042585

server during the updated communication period if the terminal user information is not re-used.

5. (Canceled)

6. (Currently amended) The ~~traveling-construction~~ machine management system according to claim 1, wherein:

the terminal has means for acquiring a current position of the ~~traveling-construction~~ machine carrying the terminal, and for outputting the current position, and

the server has means for acquiring the current position output by the terminal, and means for outputting alarm information when the current position acquired within the communication period is out of a preset range.

7. (Canceled)

8. (Canceled)

9. (Currently amended) The ~~traveling-construction~~ machine management system according to claim 2, wherein:

the terminal has means for acquiring a current position of the ~~traveling-construction~~ machine carrying the terminal, and for outputting the current position, and

the server has means for acquiring the current position output by the terminal, and means for outputting alarm information when the current position acquired within the communication period is out of a preset range.

10. (Canceled)

11. (Currently amended) The ~~traveling-construction~~ machine management system according to claim 3, wherein:

the terminal has means for acquiring a current position of the ~~traveling-construction~~ machine carrying the terminal, and for outputting the current position, and

the server has means for acquiring the current position output by the terminal and means for outputting alarm information when the current position acquired within the communication

period is out of a preset range.

12. (Canceled)

13. (Currently amended) The ~~traveling~~construction machine management system according to claim 4, wherein:

the terminal has means for acquiring a current position of the ~~traveling~~construction machine carrying the terminal, and for outputting the current position, and

the server has means for acquiring the current position output by the terminal and means for outputting alarm information when the current position acquired within the communication period is out of a preset range.

14. (New) The construction machine management system according to claim 1, wherein the server is further configured to facilitate acquiring the resale/transfer user information indicating a new user of the terminal from a selling agent's system during the communication period, and, when the resale/transfer user information indicates a new construction machine information, rewriting the new construction machine information to the machine information.
